

## INGREDIENTS, EQUIPMENT AND SUPPLIES

### Robert Bosch GmbH

The SVE 2510 DR vertical form, fill and seal machine from Bosch offers production of a broad range of bag styles and high output. With standard bag forms, speeds up to 180 bags/min can be reached.

SVE 2510 DR

Doy-style stand-ups with elliptical bottoms can be produced at speeds of up to 100 pouches/min.

The SVE 2510 DR features servo technology for easy changeover, and a modular concept that makes it possible to produce a large number of bag styles with a low machine height.

### SIG Dobby Inc.

Dobby has unveiled a new horizontal wrapper for overwrapping with shrink or polyethylene films.

The Stratus SK poly and shrink film rotary head wrapper can be used for packaging almost any regularly shaped product within the machine size limits. It comes standard with a one-

Stratus SK Rotary Head Wrapper

up rotary end seal for output of up to 90 pkg/min. The two-up version (optional) runs at up to 120 pkg/min.

Other standard features include an infeed conveyer with snap-in pushers, one film spindle and power feed roll, a vacuum conveyer film feed and wiring style former. The Dobby shrink tunnel is optional.

For use as end seal, the Stratus SK provides continuous bead seal and cutoff. When used for longitudinal seal it can lap seal with static seal, bead seal or provide a combination of the two.

### APV Baker

APV Baker is launching a new generation of ServoForm depositors for the production of hard and soft candies, toffees, gums, jellies and lollipops. The new ServoForm can produce a

wide range of multi-color and multi-component hard and soft candy products, including lollipops,

ServoForm Depositor

in one, two, three and four colors, in stripes, layers or random patterns, as well as different textures.

Three-axis servomotor control is standard. An optional fourth axis of control is available for the mould lift.

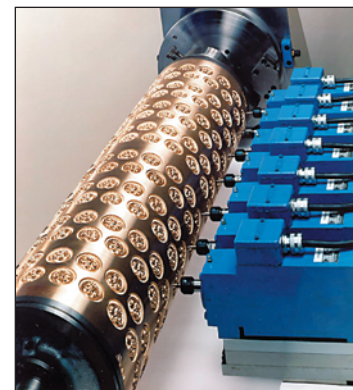

High dimensional, shape and weight accuracy; negligible scrap rates and efficient wrapping; maximum hygiene with low maintenance; aluminum mould construction; and a totally self-draining hopper are just some of the ServoForm's benefits and features.

APV Baker is also introducing a new generation of depositing system specifically for the lollipop market, incorporating many of the features of this latest candy depositor, plus the specialized mould circuit and stick placer required for automatic lollipop production.

APV Baker has also announced that it is offering custom die coatings in addition to its existing die-coating formulations.

When a new product optimally requires a slightly different coating formulation, APV Baker will work with the customer and his product to deliver die-coating characteristics specific to the product and application.

In addition to stock coating options and technology, APV Baker manufactures its own dies for its equipment as well as for competitors to help them maximize die-related productivity.
